SAFETY AND STORAGE DATA

There are no known risks associated with the handling or processing of this product. Post harvest grain is cooled by night aeration for 14 days in silos then fumigated with Carbon Dioxide to a level of 37.5% for mimimum 10 days. Once the grain is cleaned, processed and packaged it is stored in cool rooms at a maximum temperature of 11 degrees celsius. These rooms are dry and free from toxic chemicals, odours, insects and rodent infestation. It is recommended that product be stored under constant cool, dry conditions to maintain optimum freshness. No responsibility is taken for product if stored in humid, hot, dusty or infested storage. Our recommended shelf life for this product is 18 months after the production date but we will accept no responsibility for infestation once product has been accepted into the customers's storage facility.

DISCLAIMER

Information in this specification is reliable to the best of our knowledge and belief, but it is the user's responsibility to determine in the user's application and conditions the suitability of any material for a specific purpose, including consumption, and to adopt any precautions as are necessary prior to use. This product is milled in a factory which also mills products containing gluten.
